

# Modular assembly and packaging solutions

# Your partner to improve patients' lives

Stevanato Group comprises a wide set of capabilities to serve the pharmaceutical and healthcare industries. Its offer ranges from glass containers to analytical and testing services, from high-precision plastic diagnostic and medical components to contract manufacturing for drug delivery devices, visual inspection systems, assembly, and packaging equipment.

## 30 years of experience in assembly and secondary packaging processes

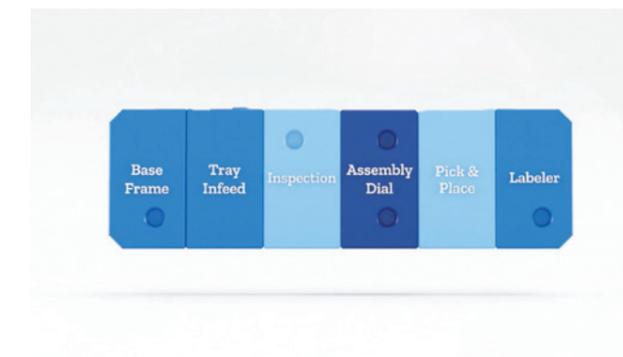

We deliver **flexible** solutions for efficient **assembly** and **packaging** of pharmaceutical and medical products, supporting you all the way from **clinical trial phases** to **high volume production**.

## The benefits of modularity

We achieve this by **combining transport platforms and process modules**, to provide **tailor-made solutions**, as we know every device is different and every company has its own specific requirements.

## Tailor made equipment that meets your exact needs

**Modularity** has several benefits, including increased **production efficiency**, **cost savings**, **shorter lead times** and **scalable capacity**.

### Scalability

Our future-proof solutions adapt to your projects, as they are able to easily ramp up and process devices from small batches to large-scale production

### Flexibility

The flexibility of modular design enables multiple product formats – and can even accommodate different devices on the same line

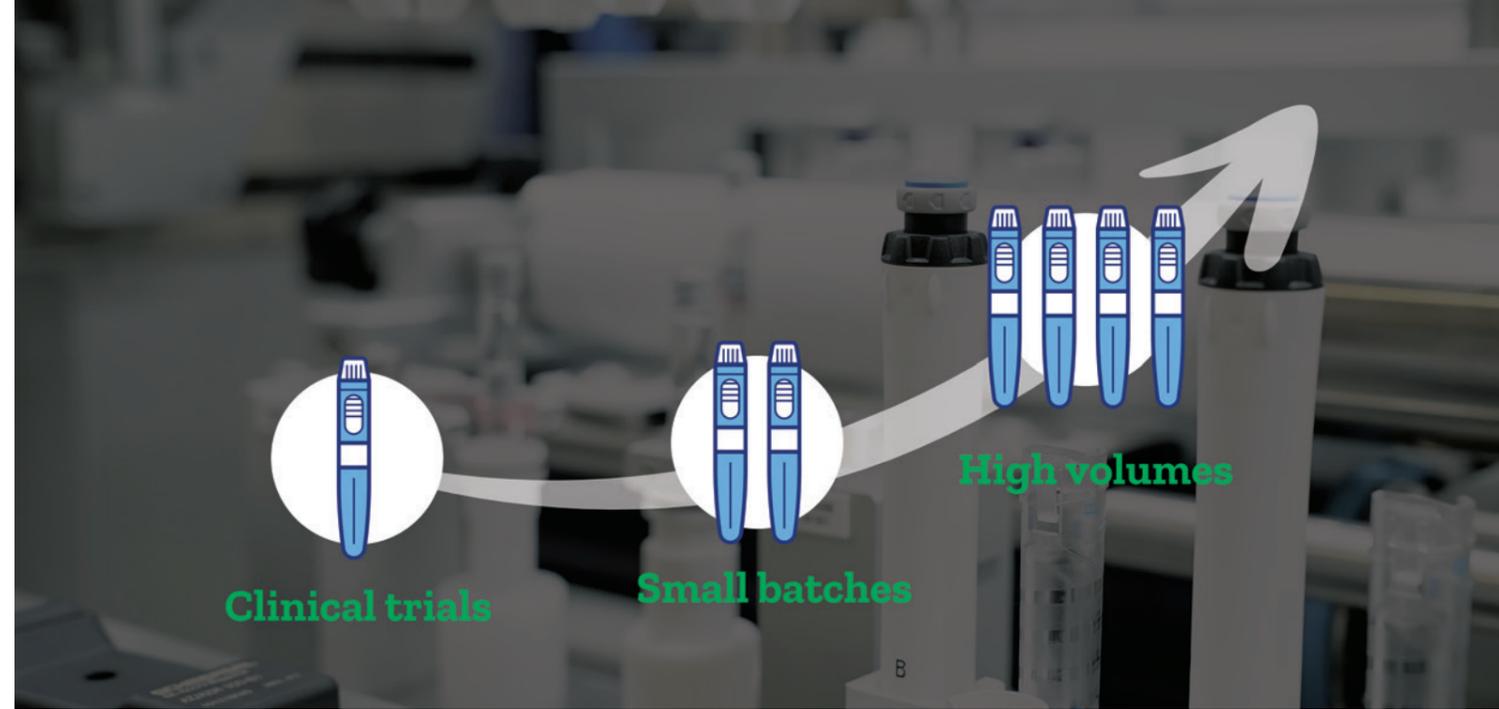

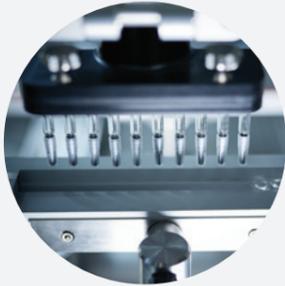

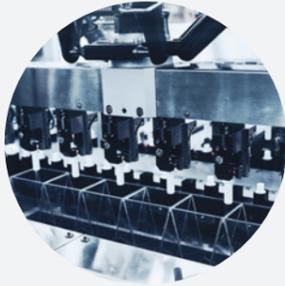

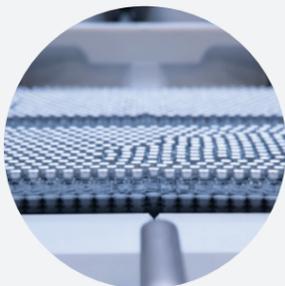

### Turnkey lines

Having assembly and packaging competences, we can easily integrate assembly, labeling, packaging and palletizing modules on the same line, via one user-friendly control panel that manages all the processes. All from one source

## Assembly expertise at the service of your device

At Stevanato Group, we design, develop, and manufacture flexible **sub-assembly** and **final assembly** lines for a wide variety of **drug delivery devices**, including auto-injectors, pen injectors, wearables and inhalers.

		
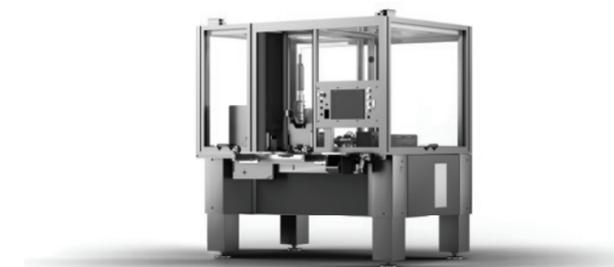

<p><b>Highly automated processes</b> to ensure production reliability and efficiency</p>	<p><b>Smooth handling</b> to guarantee flawless quality and integrity</p>	<p><b>Quick format change</b> to maximize overall equipment efficiency</p>
		
<p><b>Extensive in-line controls</b> to ensure product safety and functionality</p>	<p><b>Wide range of feeding systems</b> to adapt to your particular needs</p>	<p><b>Fully servo driven solutions</b> to secure minimum maintenance</p>

## Meet our platforms

From prototyping to fully automatic, high volume production, we deliver the assembly line that best suits your requirements, embedding different infeed, outfeed and vision inspection modules.

**Benchtop or Lab unit**  
Manual or semi-automatic assembly of a wide variety of devices. Ideal for prototyping: it can process from 1 to 6ppm

**Rotary platform**  
The round motion platform is the ideal solution for space saving assembly processes with a **low or medium volume production** (5-40ppm)

**Linear platform**  
Flexible platforms based on a vertical (BasiQX XTV) or horizontal (XTH) linear transport system for complex assembly tasks. It is the best-in-class choice for **high volume production**, scalable up to 200ppm

# Flexible packaging for a broad range of applications

Our high-end equipment can provide packaging lines for **multiple and very different packaging formats**. Stevanato Group portfolio includes a broad range of modular solutions which, put together, can deliver fully **customized solutions**, in a very **compact footprint**.

**Highly flexible production flows**  
to deliver many packaging configurations

**Automatic change-over**  
to maximize cost effectiveness

**User-friendly HMI**  
to ease your operator's activity

**Integration of any serialization system**  
to meet tightest industry requirements

## Handling systems

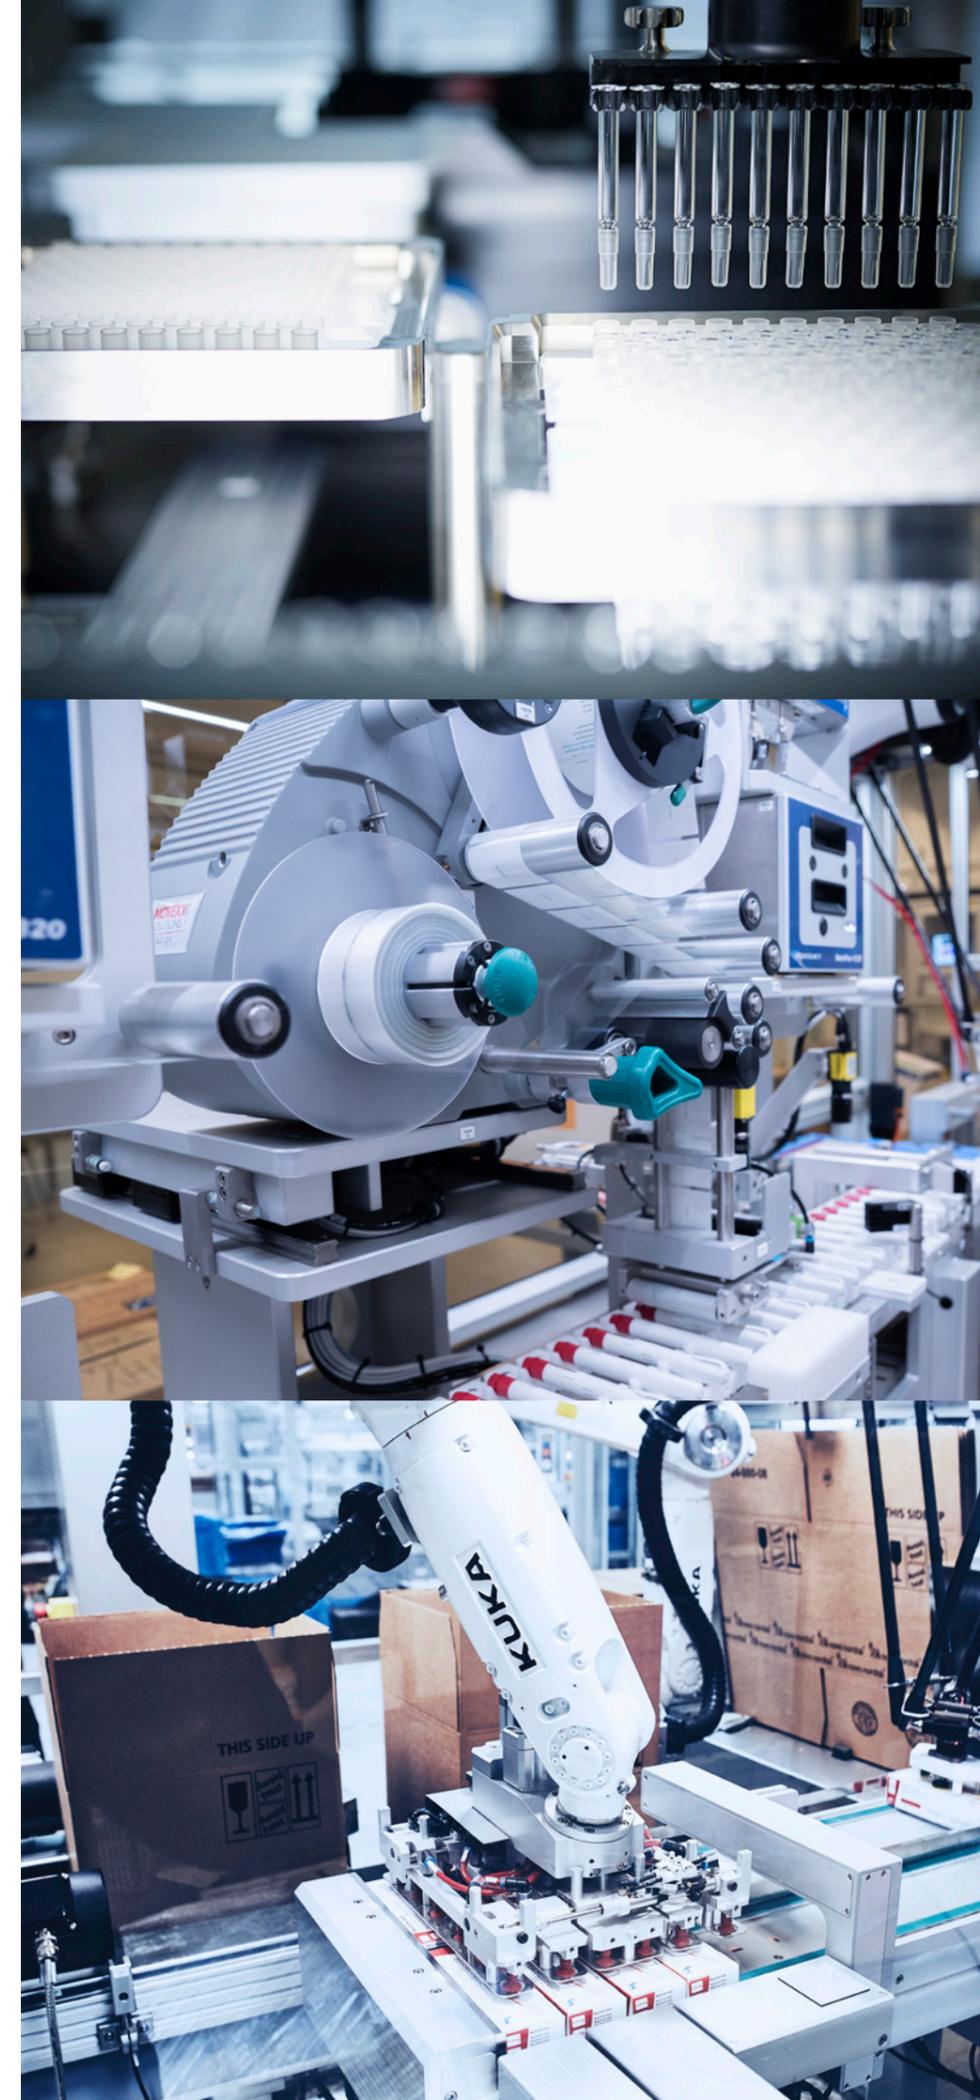

Feeding modules, de-nesting and re-nesting equipment designed and manufactured to ensure a perfect inline connection, upstream or downstream.

## Labeling and packaging solutions

Our lines perform a wide range of operations, such as coding, labeling, carton forming to check weighing, printing, marking and case packing.

## End of line equipment

Flexible options to aggregate different packaging units in a number of packaging levels, up to palletizing.
