

Steriline

ASEPTIC PROCESSING

Corporate brochure

Profile

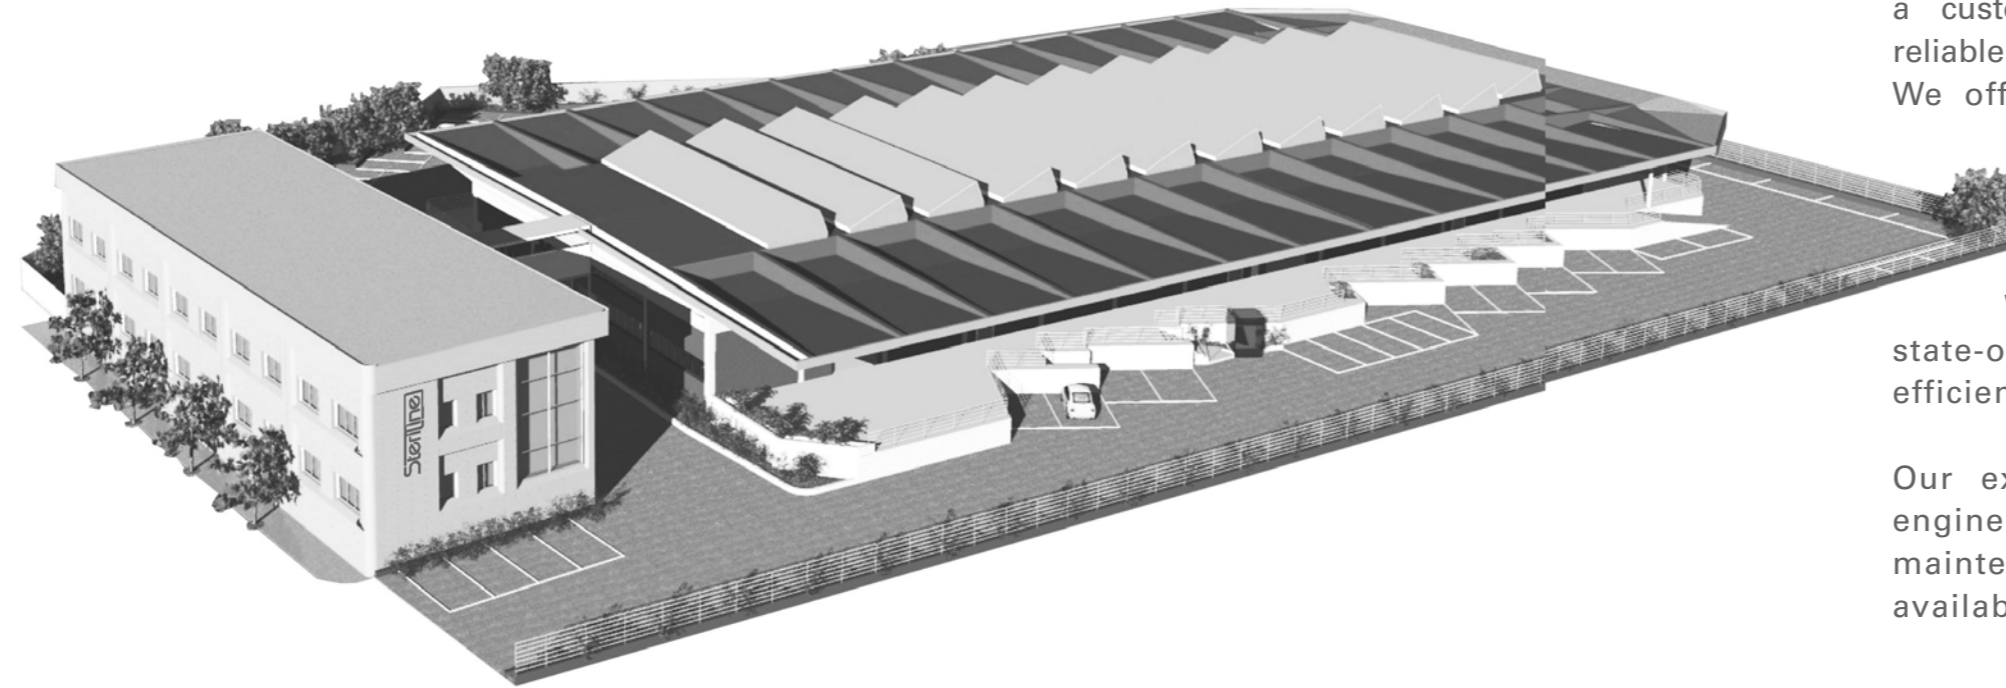

Focusing on specialisation, advanced engineering and collaborative partnerships, Steriline aims to become a preferred aseptic processing manufacturer and single-source supplier for the pharmaceutical industry.

Whether a customer is looking for a standard single machine or a customised robotic line, Steriline provides distinct, tailored and reliable solutions to satisfy the client's every need.

We offer complete planning and project management, supporting customers throughout the entire product life cycle, from the design and engineering phases through installation, qualification, validation and maintenance.

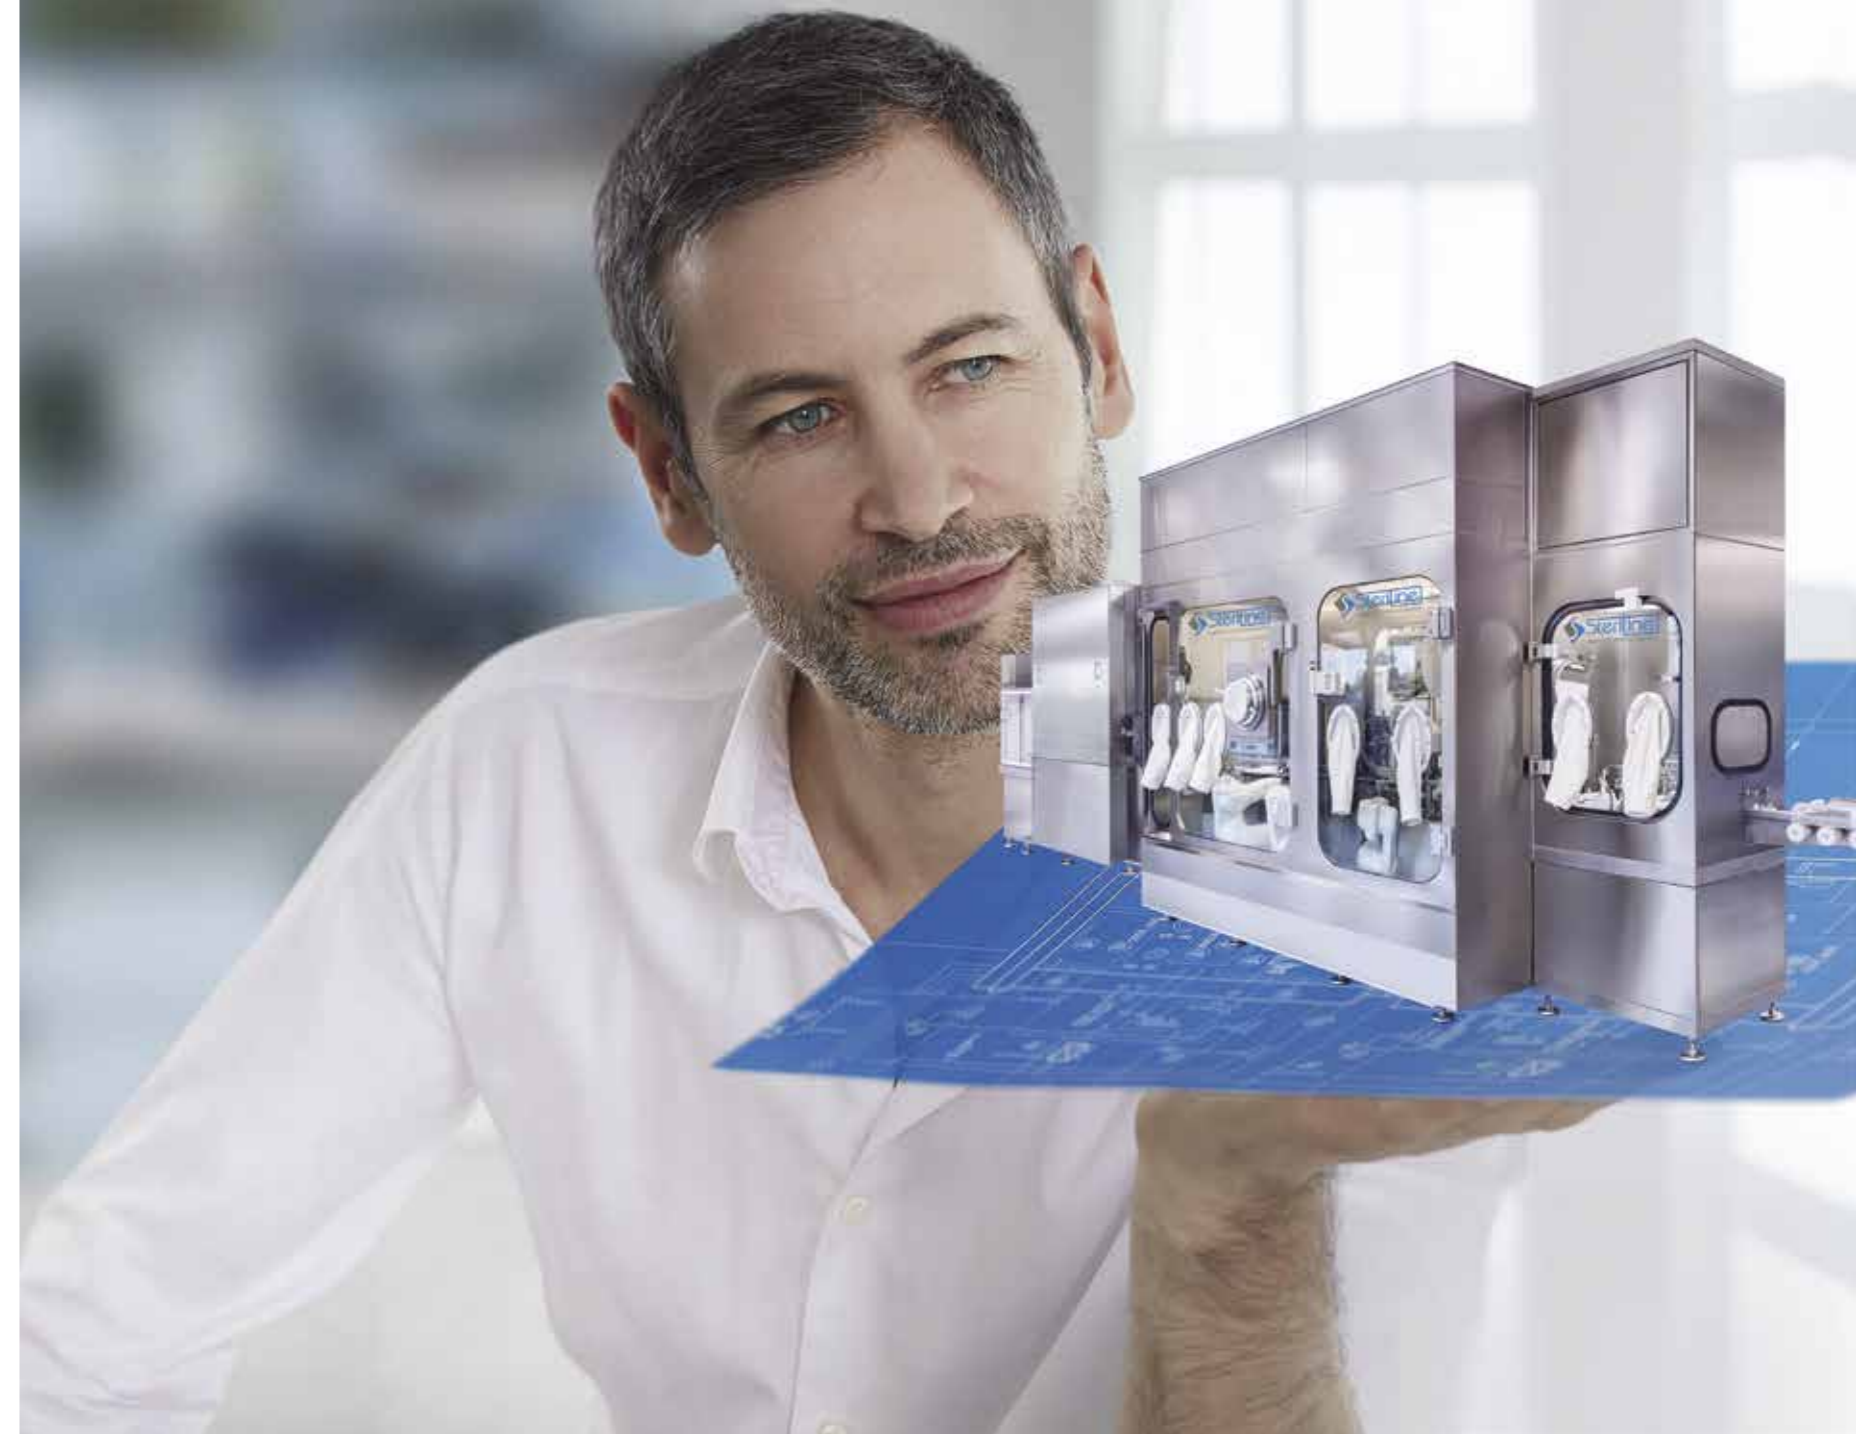

We continuously invest in research and development to provide state-of-the-art technologies that meet customers' goals, to improve efficiency, increase safety and deliver high-quality products.

Our expanding customer service department, staffed by skilled engineers, provides prompt support to all types of queries. A standard maintenance programme, as well as premium service solutions, are available to satisfy the most demanding requirements.

The expansion of the sales network and marketing team ensures an effective coverage of global markets, raising brand awareness and consideration.

WE DON'T
JUST **FIND**
SOLUTIONS,
WE **ENGINEER**
THEM.

...that simplifies life.

The Company

Steriline is an expanding European manufacturer highly specialised in the production of complete lines for the aseptic processing of injectable products, supplying pharmaceutical companies worldwide.

In 1989, Steriline was founded in the Como area (Italy), where its headquarters and manufacturing facilities are still based. With operations in over **50 countries** around the world, Steriline has developed a vast network of over 180 people, including direct employees, external partners and 40 sales representatives. Exports represent more than 90% of Steriline's turnover with over 1300 machines installed throughout **Asia, Europe and the U.S.A.**

With the focus on specialisation, advanced engineering and collaborative partnerships, Steriline aims to become a preferred aseptic processing manufacturer for the pharmaceutical industry.

Steriline is committed to providing customers with distinct, tailored and reliable solutions to help them meet a growing demand in the sector for improved efficiency, consistent quality and enhanced safety. First established as a manufacturer of washing machines and depyrogenation tunnels, in 2007 Steriline launched its first complete line including isolators and filling and capping machines. Since then, Steriline has very successfully

evolved into **a single-source supplier of equipment solutions for the primary packaging of injectable drugs**, ranging from complete lines to stand-alone machines.

As a testament to its commitment to Research & Development and technological innovation, in 2014 Steriline became a pioneer by introducing the first robotic application in the aseptic processing market. It was a groundbreaking solution that was built with a “zero-loss philosophy” and no format parts. Currently, Steriline develops, manufactures and supplies a comprehensive range of solutions, including **both mechanical and robotic applications** for aseptic processing. These applications are compatible with vials, ampoules, cartridges and syringes and can handle toxic or non-toxic products in both liquid and powder form. Steriline’s **complete lines include** equipment spanning from washing machines, depyrogenation tunnels, filling and capping machines to external decontamination machines and barrier systems such as LAF, oRABS, cRABS and isolators.

Robotics will play a key role in the future of the pharmaceutical industry, as it continues to define new paradigms for manufacturing. In this scenario, **Steriline is currently expanding its portfolio of robotic solutions considerably**, to further help injectable drug manufacturers successfully face the new global challenges. Steriline’s continuous drive for technological improvements and its strategic approach to innovation is achieved by a **close and well established collaboration with Fondazione Politecnico di Milano**.

The partnership with Politecnico di Milano led to a joint project on robotics and artificial vision that became **Steriline Robotics**. The company produces and supplies innovative Intelligent Compounding Systems for the preparation of injectable drugs in Hospitals and compounding centres.

Another crucial asset is Steriline’s relationship with customers, which is shaped around a **dialogue that is frequent, open and ongoing at all stages of the product lifecycle**. Whether a company is looking for a standard single machine or a customised robotic line, Steriline can leverage its **inventive approach to engineering and advanced project management capabilities** to deliver the most effective solutions for every customer-specific need.

In addition to offering throughout planning and project management, Steriline supports customers from the design and manufacturing phases through installation, qualification, validation and maintenance.

Additionally, Steriline provides **extensive customer support services including technical assistance** through a staff of skilled engineers.

Established as a family-owned business more than 25 years ago, Steriline is still guided today by its founder, Gerardo Fumagalli, *the Chief Executive Officer*, jointly with Ilaria Fumagalli, *Chief Operating Officer*, and Federico Fumagalli, *Chief Commercial Officer*.

Tagline: performing solutions

Our commitment to be the perfect partner for our clients, by engineering solutions for their specific needs, led us to define our tagline:

It reflects Steriline's ability to deliver tailored and unique products to customers, starting from the identification of their needs, through engineering to performance.

Product portfolio

■ STANDARD RANGE

Rotary washing machine, RA-RC
 Depyrogenation tunnel, ST
 Filling machine, VFM
 Capping machine, VCM
 External decontamination machine, EDM
 Ancillary equipment

■ ROBOTIC RANGE

Vial filling machine, RVFM
 Vial capping machine, RVCM
 External decontamination machine, EDM-RHP
 Tray loader, RTL
 Tub decontamination system, RTDS2
 Nest filling machine, RNFM

■ CONTAINMENT AND ISOLATION

LAF and oRABS
 In-line cRABS and isolator
 Stand-alone isolator

■ INTELLIGENT COMPOUNDING SYSTEM
